

2002/1/30 CALS/EC MESSE 2002

IT Utilization in Construction Field of Taiwan

Kai-Lin HSU

Director, Construction Automation and E-commerce Center

Taiwan Construction Research Institute

Presentation Overview

- #1 Introduction of IT into Taiwan Construction-related Public Sectors*
 - #2 Present Major Difficulties for Promoting IT in Taiwan Construction Field*
 - #3 Present Development of Government Procurement Information System in Taiwan*
 - #4 Future Development & Trend of IT in Taiwan Construction Field*
-

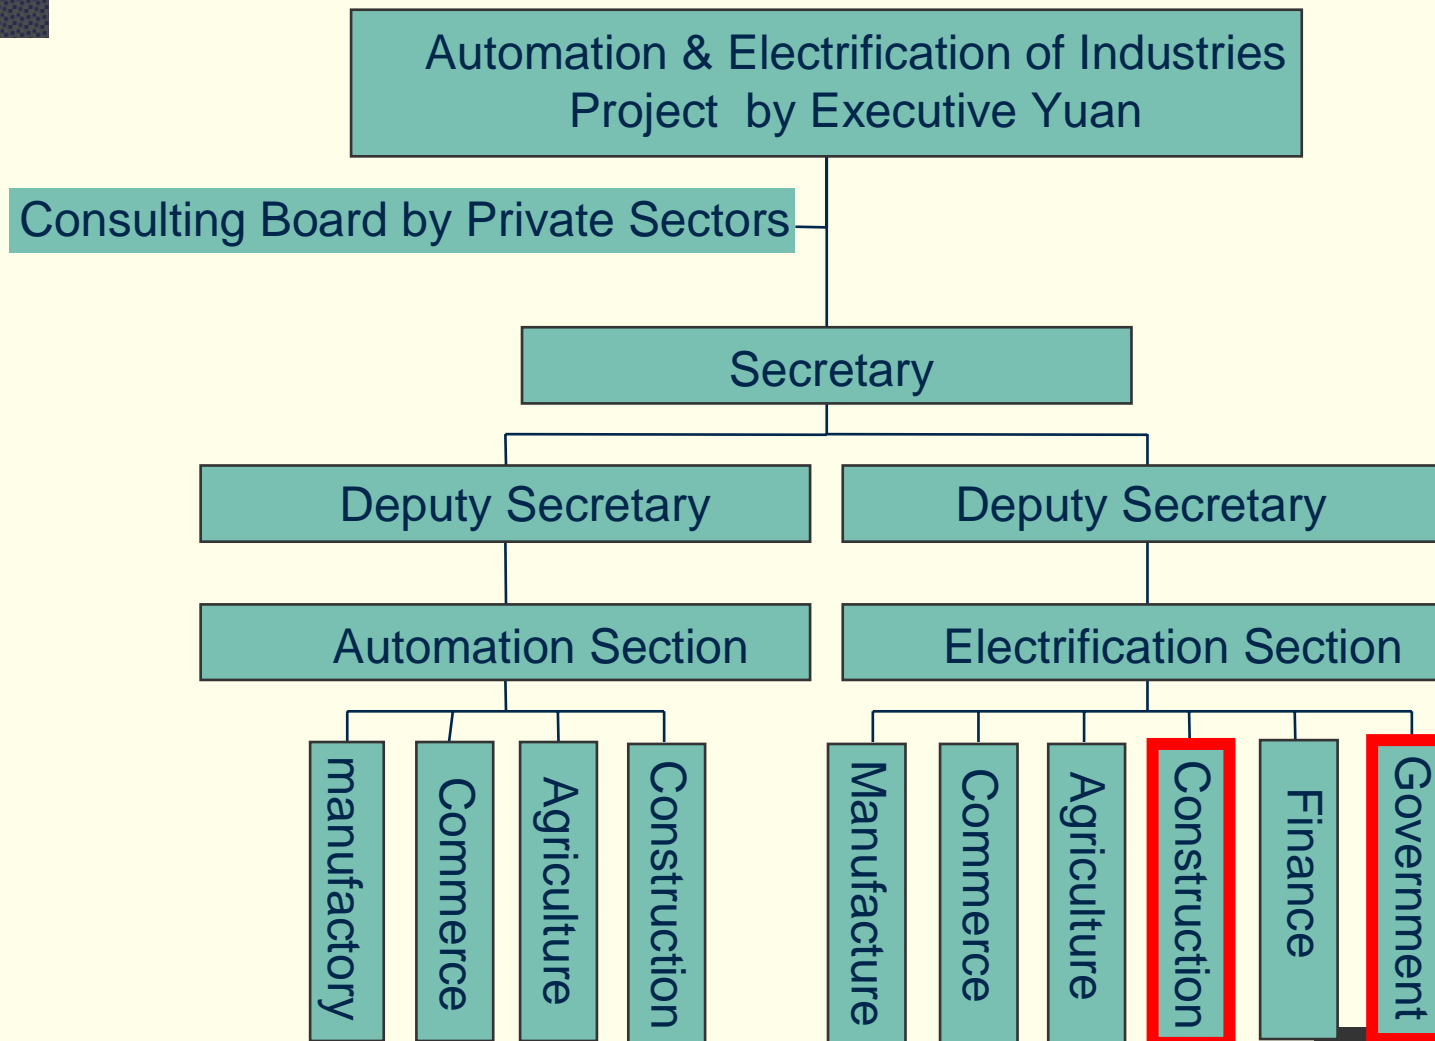

*Introduction of IT into Taiwan
Construction-related Public Sectors*

Present Development of IT Introduction into Taiwan Industries

In order to promote Taiwan competence of industries, Taiwan Executive Yuan passed the action program “**Promotion Act for Automation & Electrification of Taiwan Industries (PAAETI)**” in June 1999 , it was expected to effectively diminish the cost of business operation , by assisting the introduction of IT into the business application of industries .

Besides, through the **pilot project** for offering **online bidding and procurement of government units**, the utilization of IT within industries can be stimulated.

Promotion Structure for Automation & Electrification Project by Executive Yuan

Promotion Measures for IT Utilization of Industries in Taiwan

Promotion Measures

Promotion Strategy

- Fundamental Environment
- Model Project
- Offering Investment Encouragement
- Pilot Project by Government Units

- Reduce Tax
- Special Discount on Loan
- Infrastructure
- Cooperation with Government Sectors
- Technology Development
- Standardization
- Strategy Research
- Promotion
- HR Training

E-government within Taiwan
Construction-related Public Sectors (1/3)
Public Construction Commission (PCC)

- # Offer government **online procurement** clearinghouse
- # Set up **E-catalogue and Bid/request** for proposal system
- # Construct **online certification and contracting** system- under test
- # Construct **online posting/receiving bids** system- under test
- # URL : <http://www.pcc.gov.tw>
 - Bidding information web :
<http://www.pcc.gov.tw/big5/cgpis.htm>

E-government within Taiwan ***Construction-related Public Sectors (2/3)***

Construction and Planning Administration, Ministry of Interior(CPAMI)

- # **Online upload and download of automation and electrification research results**
- # **Offer online service and search engine on related code, statistics, real estate information, local development project information for safety of public structures, etc.**
- # **URL : <http://www.cpami.gov.tw>**
 - **Automation and electrification : <http://www.cpami.gov.tw/casa/index.htm>**

E-government within Taiwan
Construction-related Public Sectors (3/3)
Architecture Research Institute (ARI)

- # Scopes for search engine :**
 - Building codes、 resource catalogues、 contract、 elemental graphics、 construction specification、 national standards、 machinery on rental、 human resource, etc.**
 - # URL : <http://arch.org.tw>**
-

Background of Introducing IT into Taiwan Construction Field

- # **Declination** of Economic growth and domestic market and Entrance into WTO since Jan. 2002, Construction Industry in Taiwan is facing the **most serious challenge**
 - # If construction engineering cannot utilize IT to **integrate and manage the engineering information during life cycle**, the **efficiency** of construction is seriously affected and even the quality of construction will be influenced
 - # The **importance** of IT can be more **significant** for the modern buildings or large-scale infrastructures due to the high **complexity**
 - # **Construction IT** is the **key success factor** during the **competition** of next-generation construction industry
-

Promoting IT Application within Taiwan construction industry (1/2)

Construction and Planning Administration, Ministry of Interior (CPAMI) sets up “Promotion Project of Automation and Electrification for Construction industry (PPAEC)” in 1999

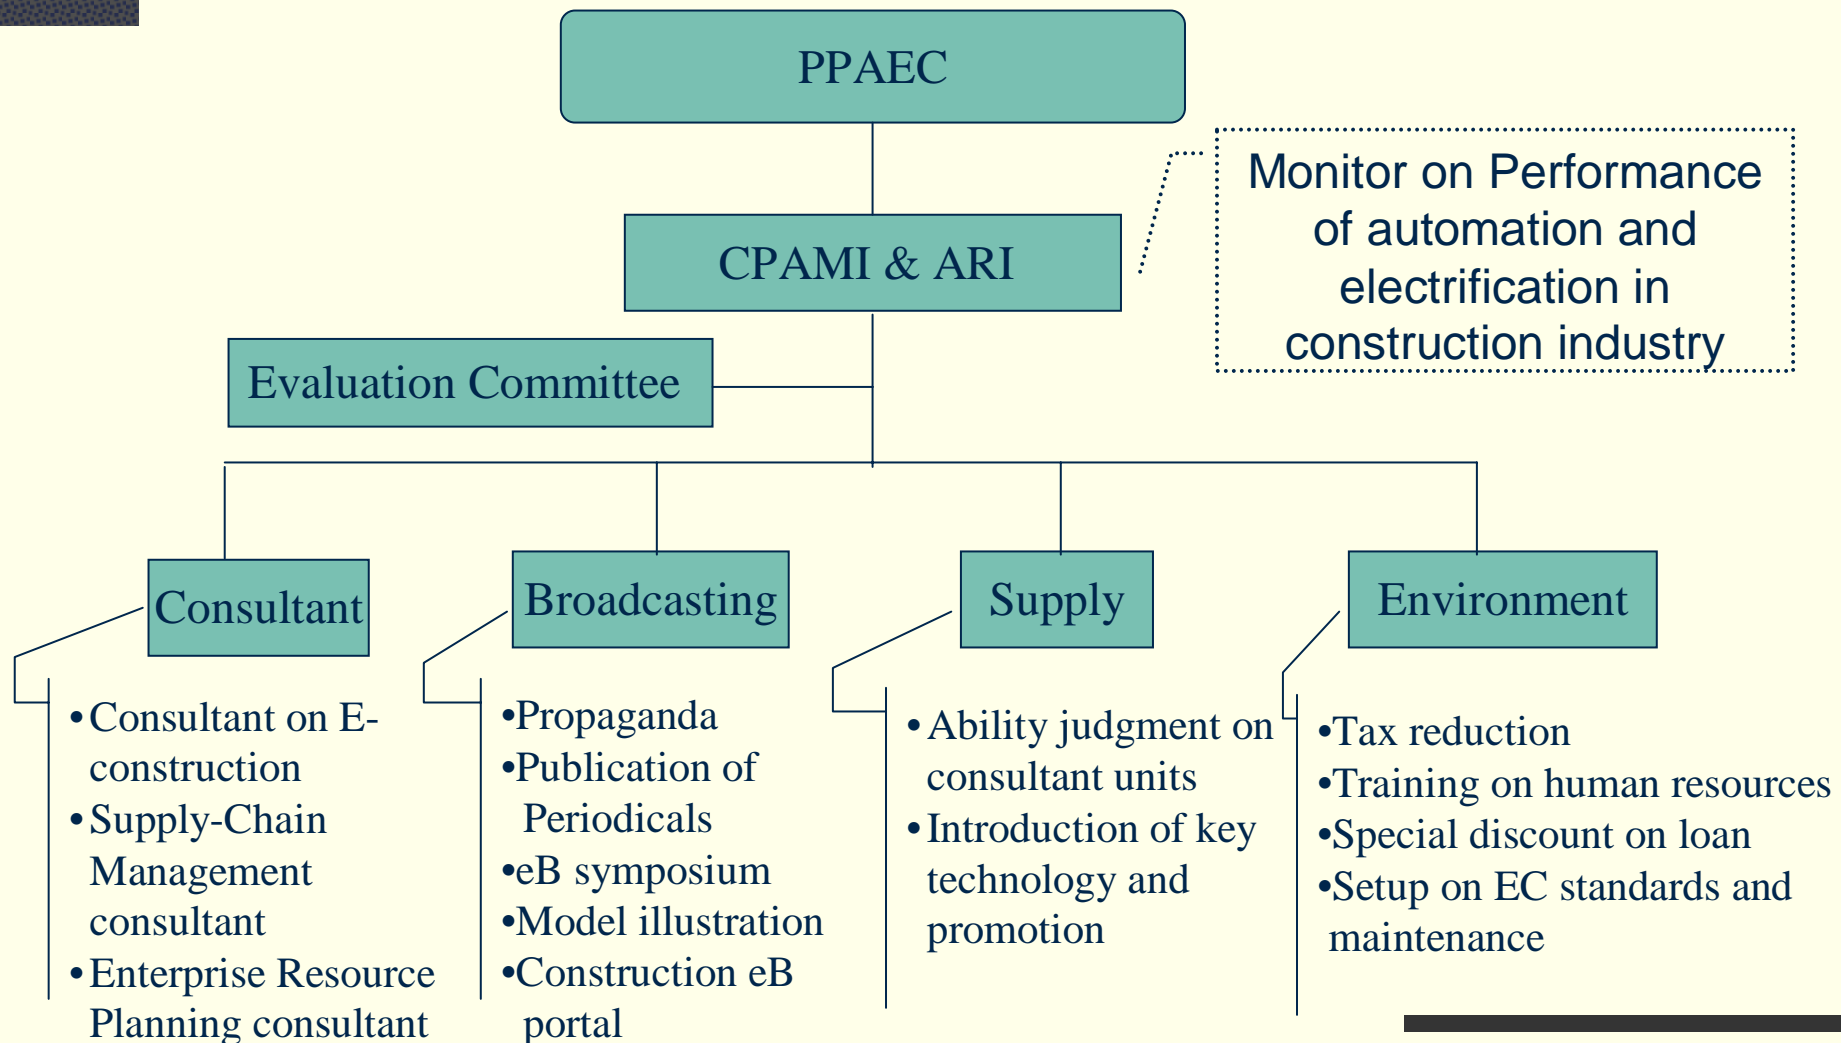

Development Goal :

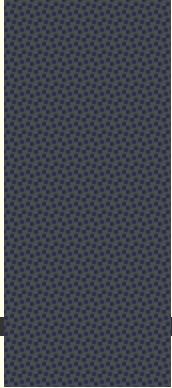

Short term	Midterm	Long term
<ul style="list-style-type: none"># Introduction of E-process within 250 construction companies# Training on Human Resources# Enrollment for information Consultant Company	<ul style="list-style-type: none"># Introduction of E-process within 500 construction companies# Training on Human Resources for 12000 persons	<ul style="list-style-type: none"># Promotion on EDI and BPR# Integration on Construction-related information and setup of construction database

Promoting IT Application within Taiwan construction industry (2/2)

- 1.PPAEC Action period** : Nov.1999-Dec.2004
 - 2.Expected points of interest** : achieve 10-15 supply-chain systems within Taiwan construction industry and result in IT utilization within 1000 medium and small size construction-related companies
 - 3.Target** : Real Estate Planner、 General Contractor、 Architect、 Professional Engineer
 - 4.Subsidy fee** : 50% self investment and 50% from government support for building individual IT system
-

Promotion Strategy Layout for IT Application with Taiwan Construction Industry

*Present Major Difficulties for
Promoting IT in Taiwan
Construction Field*

Major Difficulties on Promoting IT within Taiwan Construction Industry

- 1. No unified promotion organization**
 - 2. diversified demands for IT application**
 - 3. hard to renew concept of A&C engineers on their workflow**
 - 4. worry on network security**
 - 5. hard to bring out for standardization of A&C**
 - 6. unclear policy of government on promoting IT with construction industry.**
 - 7. High cost for introducing IT**
-

Comparison between Taiwan Industries for Promoting IT (1/4)

Industry	Manufactory or Commerce	Construction
Market Demand	<ul style="list-style-type: none"> # Demand always by customers # international competence naturally # product and service level expanded # demand on prompt information (like order processing ,etc.) 	<ul style="list-style-type: none"> # few demand from customers # no international competence before entering WTO # long life cycle,low demand on prompt information but information complicated
Customer Feature	<ul style="list-style-type: none"> # homogeneity of customer features # most customers have high professional knowledge and IT skill # Urgent on IT demand due to internationalization # Strong demand from customers to introduce IT into supplier process 	<ul style="list-style-type: none"> # heterogeneity of customers # deficiency in professional knowledge and IT skill of partial customers # low IT level of customers and no prompt IT demand on products # diversified demand from customers

Comparison between Taiwan Industries for Promoting IT (2/4)

Industry	Manufactory or Commerce	Construction
Supply-Chain Consultant	<ul style="list-style-type: none"> # High IT skills owned by supplier # simpler supply-chain relationship # similar professional field for similar suppliers # suppliers under consultant : large economic scale : significant economic efficiency due to IT # promotion : top-down 	<ul style="list-style-type: none"> # Low IT skills of construction-related suppliers # complicated supply-chain relationship, no clear distinction between tasks # dissimilar professional field for similar suppliers # suppliers under consultant due to no large economic scale : limited economic efficiency due to IT # promotion : down-top, and no IT introduction into related construction-related public units
Propaganda	Some specified organization takes charge of all the tasks of the promotion project	No specified organization takes charge of the promotion project; all are distributed into different organizations

Comparison between Taiwan Industries for Promoting IT (3/4)

Industry	Manufactory or Commerce	Construction
HR Training	<ul style="list-style-type: none"> # many training centers at present # training content and lecturers can be most fit for manufactory 	<ul style="list-style-type: none"> # no concrete training program at present # few training centers and few suitable courses and lecturers for construction
Standardization	<ul style="list-style-type: none"> # most products are standardized # specified unit takes charge of standardization and cooperation with international standardization organization for long time # workflow of suppliers are almost standardized and unified 	<ul style="list-style-type: none"> # most products are not standardized; however, PCC is engaging to unify the construction code of public work # although some specified unit is taking charge of standardization, no long-term planning and consecutive work # work of most suppliers are not standardized and lack of unification

Comparison between Taiwan Industries for Promoting IT (3/4)

Industry	Manufactory or Commerce	Construction
Promotion Strategy	<ul style="list-style-type: none"> # based on PAAETI # success on integration with industry, government and academy units for promoting IT # all the tasks of promotion project are assigned to specified organization and no involvement of governmental units # target for promoting IT : private sectors # efficient assistance from the successful integration on related public sectors 	<ul style="list-style-type: none"> # based on PAAETI # fail on integration with industry, government and academy units for promoting IT # all the tasks of promotion project are executed by governmental units (like CPAMI or ARI); no specified organization is assigned # target for promoting IT : private sectors and public sectors # inefficient assistance from the failed integration on related public sectors

*Present Development of
Government Procurement
Information System in
Taiwan*

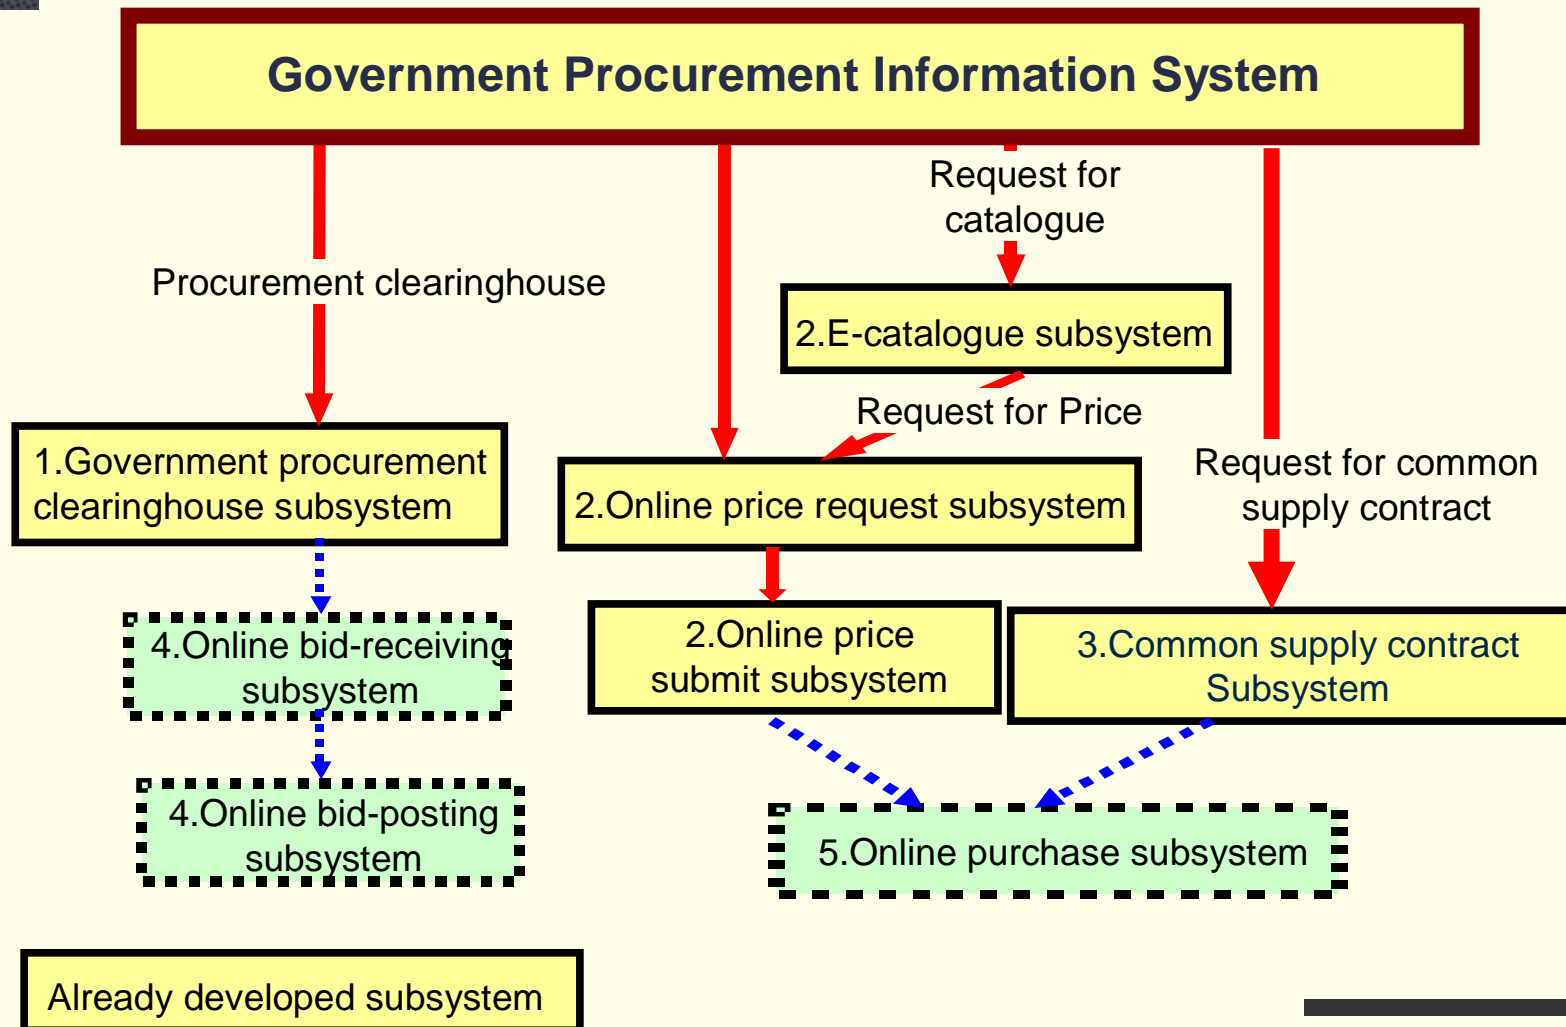

Major Difficulties on Taiwan Procurement Procedure

- 1. Too many channels related to tendering information**
- 2. Difficult to decide the specification of tendering**
- 3. Difficult to decide the ceiling price**
- 4. Difficult to identify the vendors**
- 5. Possible abuse on public assets**
- 6. High-frequency repetitive process on procurement**
- 7. Inconvenient for receiving bid**
- 8. Inconvenient for posting bid**

***Taiwan Government
Procurement Information
System***

Illustration of Taiwan Government Procurement Information System

Government Procurement Clearinghouse Subsystem

<http://web.pcc.gov.tw/>

The screenshot shows the homepage of the Government Procurement Information Announcement System. The header features the system name in Chinese and English, the URL, and the logo of the Executive Yuan Public Works Committee. A left sidebar contains navigation links such as 'Apply for membership', 'Member renewal application', 'Usage instructions', 'System introduction', 'Consulting services', 'Refusal of business partner list', and 'Government Procurement Act'. The main content area includes a login form with fields for 'Usage ID' and 'Password', and buttons for 'Execute' and 'Clear input area'. Below the form, there is a message about the system's design based on the Government Procurement Act and a contact email address. At the bottom, a digital display shows the number of visitors and the current time.

E-catalogue and Submit/request for Price Subsystem

<http://gecs.pcc.gov.tw/>

Present Development of Online Receiving/Posting Bid Subsystems

<http://www.geps.gov.tw/>

Online bid-receiving subsystem

- **Online : Apr.1, 2000**
- **Test period : 2000/4/1-2001/5/31**
- **System start : Jun.1, 2001**

Online bid-posting subsystem

- **Online : Aug.1, 2000**
 - **Test period : 2002/1/1-2002/6/30**
 - **System start : Jul.1, 2002**
-

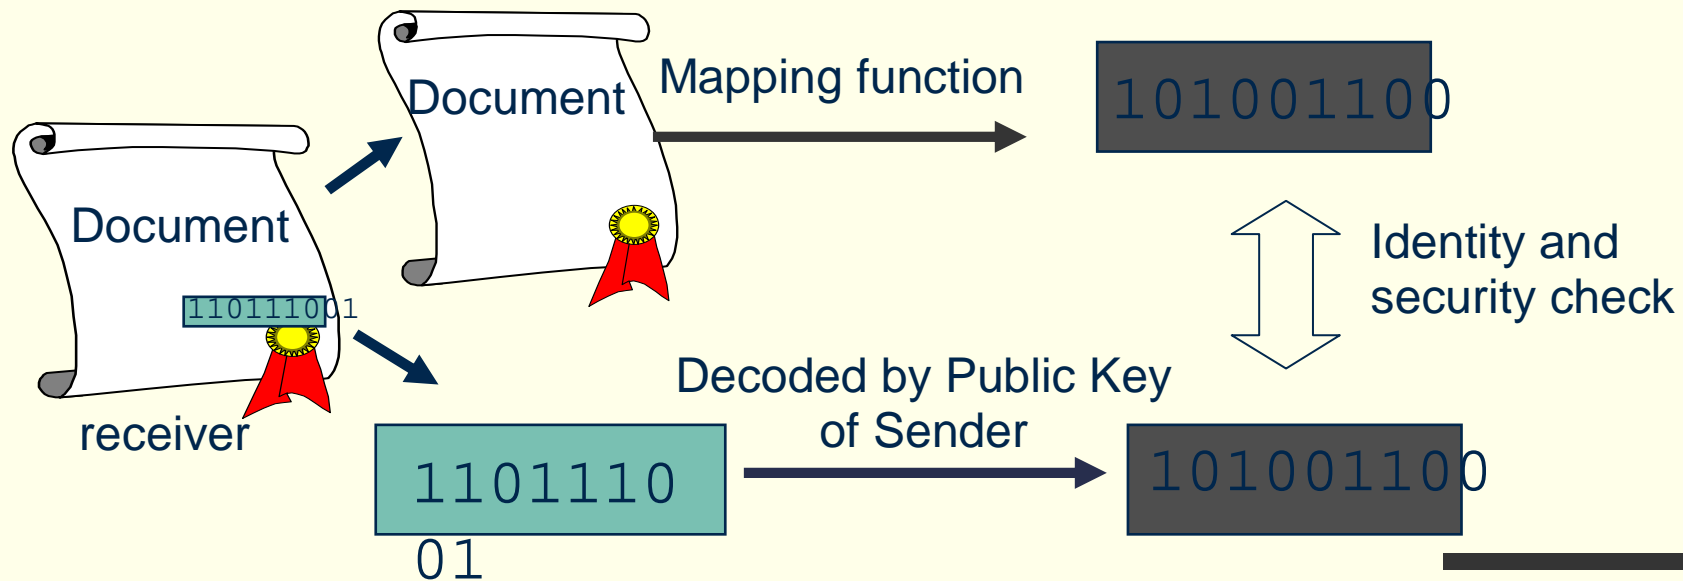

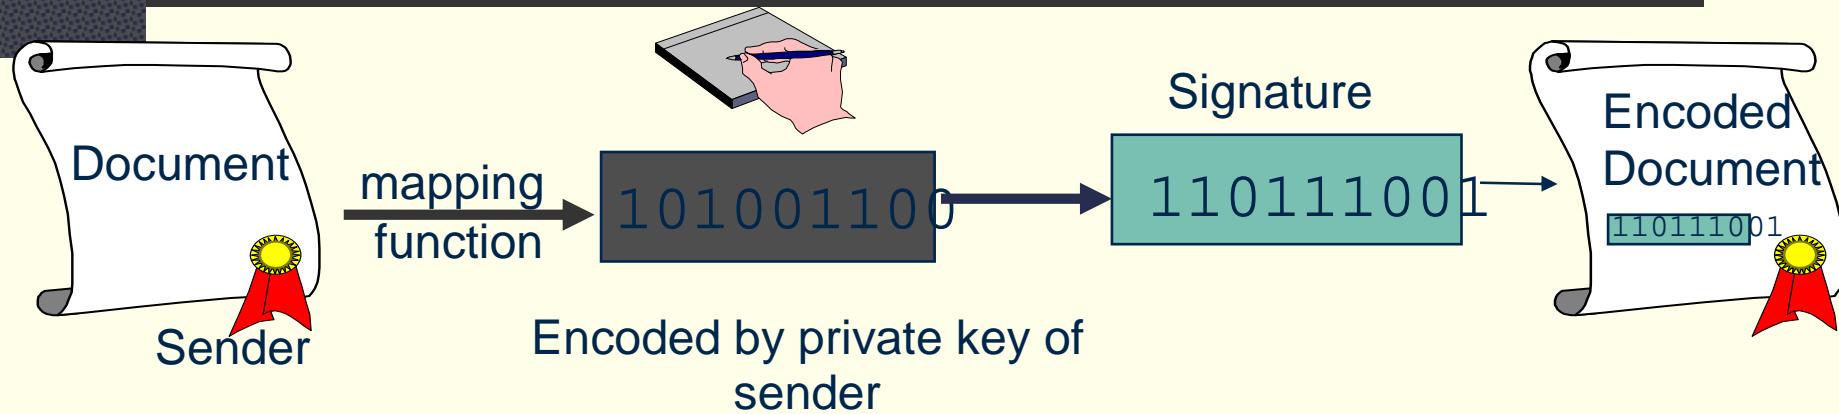

Time Schedule for Receiving/Posting Bid Subsystems

Time Unit	2002	2003	2004	2005	2006	
Pilot project	10%					
Major government units		15%	30%	50%	80%	100%
Local government units		5%	20%	40%	70%	90%

Some Important Information Related to Government Procurement System within Taiwan

- # 「**Electrified Signature Law**」 has been passed on Nov.2001 by Taiwan Congress
 - Online tendering document can be regarded as official document
 - Efficiently enhance the willingness of suppliers to join government procurement information system
-

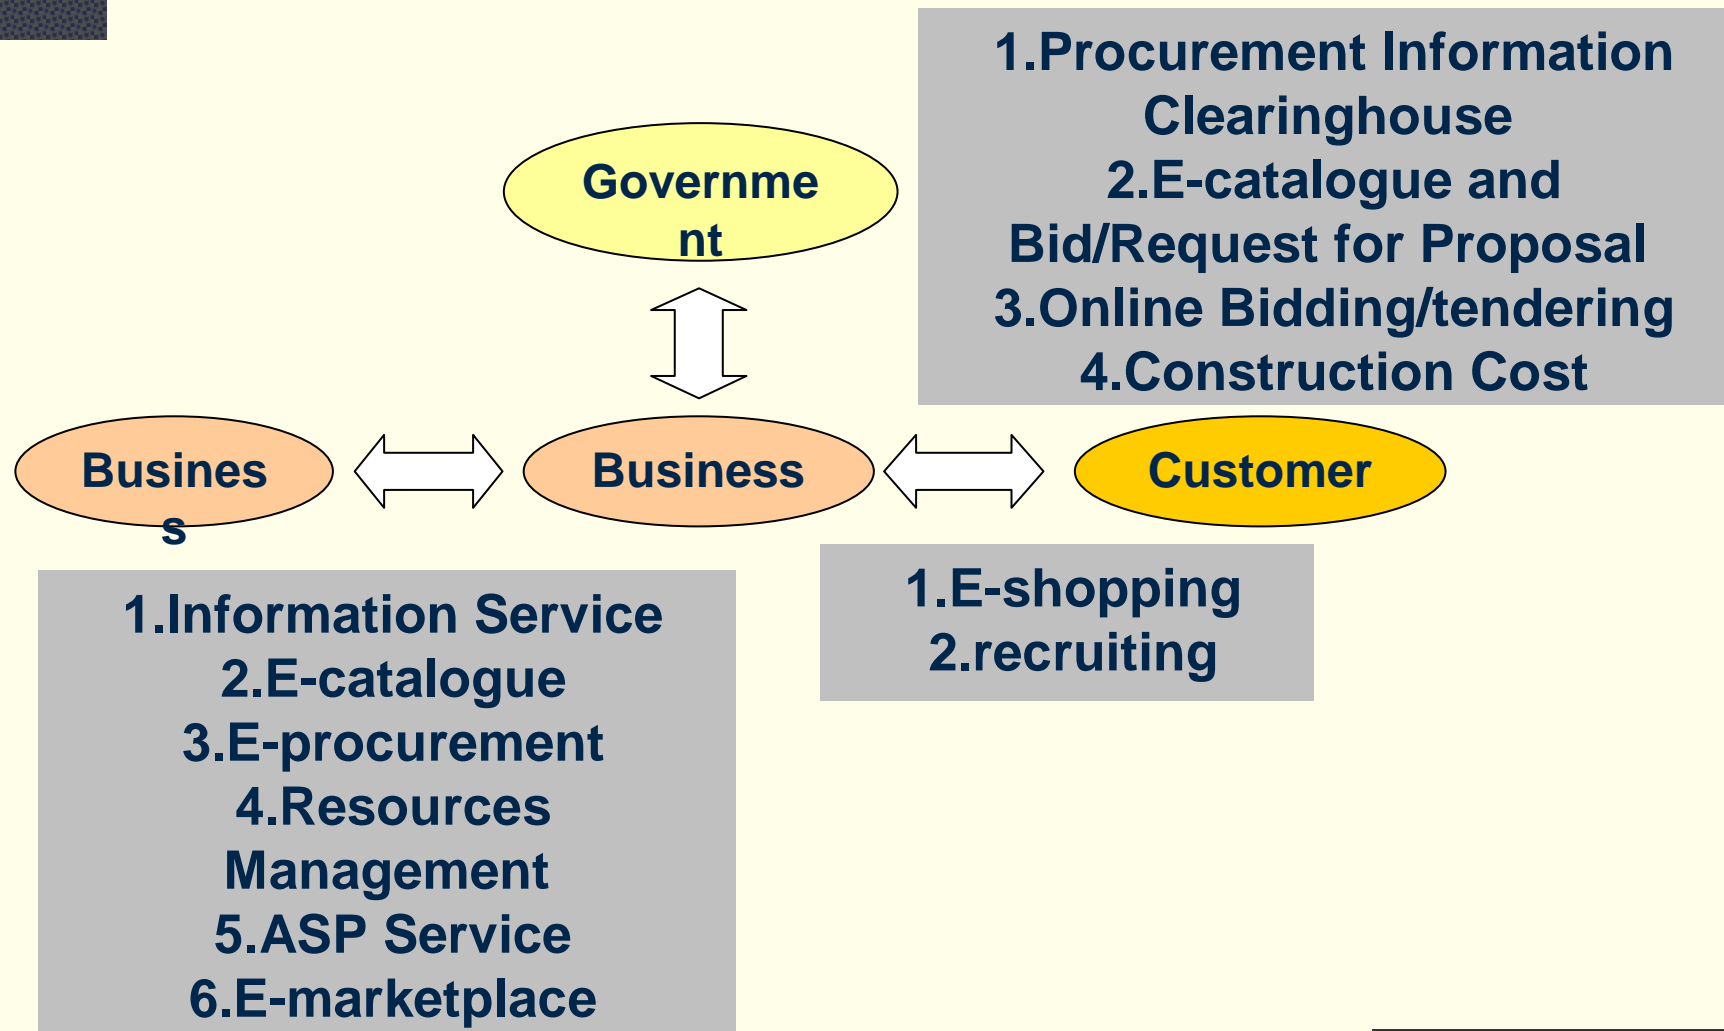

Illustration on Digital Signature

*Future Development & Trend
of IT in Taiwan Construction
Field*

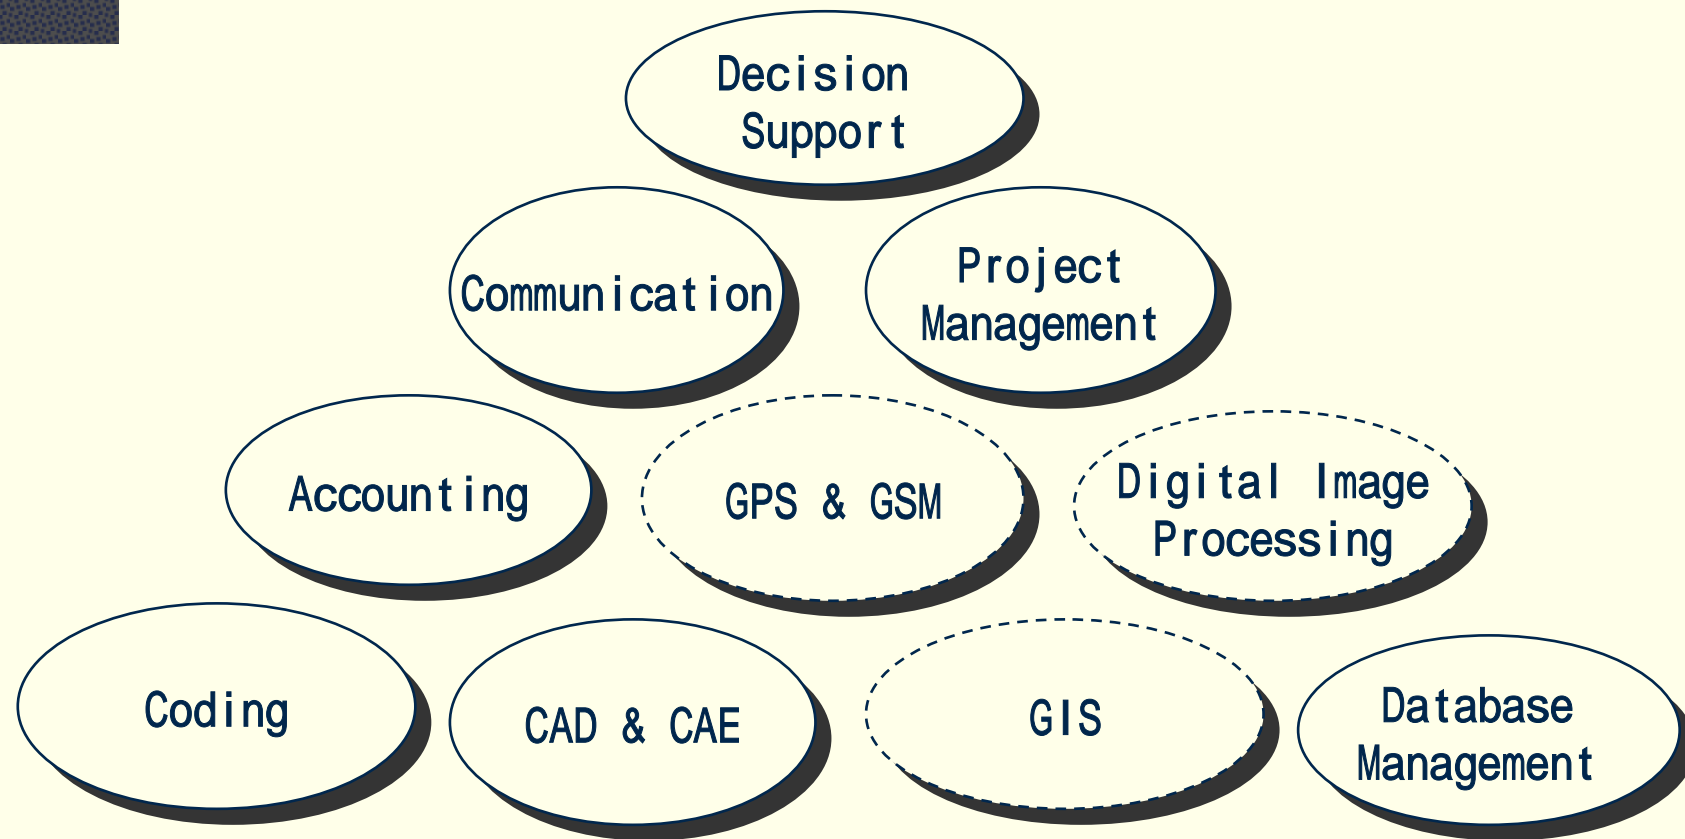

Potential Application of IT in Construction Field

Technology related to E-Commerce

IT Components related to Construction Field

Application and Integration of IT

Observation on the future IT development of construction field

- # Evolving from the distributed units by assigned work to **integrated group by value chain**
 - # Different expertise or function will develop into **chained competitive relationship**
 - # **Information** itself becomes the **essential binder** during life cycle of construction stages; the **efficiency** on dealing with information is the **success key factor** of competence
 - # Beside the operation mechanism in the real world, the **virtual market integration** mechanism is also created
-

Future Direction for Taiwan Construction-related public sectors on IT Application

1. Offer solid **infrastructure** on network communication
 2. Assure **security** on online transaction
 3. Assist enterprise to train IT **people**
 4. Adjust related **laws** and specifications
 5. **Encourage** investment on IT
 6. Establish **standardization** of information exchange
 7. Offer **consultant** on introduction of IT
 8. Set up **promotion** organization
 9. Carry out **pilot** project
-

Milestones for Construction Industries on IT application

- # Help construction industry get used to IT application on business and the integration of **information flow**
 - # Help construction industry applying IT application on on business with the integration of **cash flow**
 - # Help construction industry applying IT application on on business with the best **allocation of resources**
-

Vision on promoting IT application on construction field (1/3)

Strategic aspect

- Primarily led by future-established **ministry of construction** , by cooperating with ministry of economic affairs , set up some **task unit** to promote and realize the related IT measures
 - Through pilot project, understand the merits and difficulties of IT application in construction field; then, improve
 - By KPI (key performance index) , evaluate the **performance** of construction IT
-

Vision on promoting IT application on construction field (2/3)

Standardization aspect

- **Government** sector or professional **organization** should be charge of IT standardization and localization of construction field
 - The development of standardization should be **internationally** exchangeable
 - IT standardization
 - Documentation : **XML** (aecXML)
 - Graphical information : **STEP/IFC**
-

Vision on promoting IT application on construction field (3/3)

Information technology aspect

- Continuously **reinforce** IT application on construction field
 - Aim at **information sharing and automatic processing** during construction life cycle
 - Enhance **cooperation** between construction industry and information industry
 - Develop **localized** software for construction industries
-

Thank you
